

# Antares Air System® – The perfect exhaust performance for flat roofs

The internationally registered ANTARES ventilation cap is the most versatile among the ventilation hats and has been a tried and tested Ohnsorg product in the ventilation sector for years. Now, ANTARES is also available as a complete system for flat roofs – **Antares Air System®**. This innovative exhaust solution comprises the following three components:

- the long-established ANTARES ventilation cap
- a pipe equipped with 25 mm thick thermal insulation
- a tray welded to it.

The inner tube of the ventilator fits precisely into the insulation made of heat-resistant, non-combustible rock wool, making it extremely compact. This turns the **Antares Air System®** into a ready-made enclosure that can be easily and quickly installed on any flat roof. Just coat the tray with bitumen, cover with roofing material – and it's done!

This complete system is available in materials such as copper, aluminum, and chromium-nickel steel.

### Your advantages with the **Antares Air System®** Ventilation Cap:

- Maintenance-free
- Made of high-quality metal
- No disturbing wind noise
- Extremely long service life
- Swiss quality product
- Best protection against precipitation (rain, snow, hail)
- Perfect exhaust performance, virtually no friction loss occurs

**Antares Air System®:**  
An investment that pays off over many years.
